

IT Lifecycle Management

A forward-thinking supply chain model to manage your technology ecosystem.

About CNE

A digital lifecycle company, CNE recognizes the challenges companies face with managing the different stages of a product's technology lifecycle. From product procurement, to repair, to disposition – IT lifecycle management can challenge even the most seasoned IT departments.

With over 20 years of global IT lifecycle management expertise, CNE offers a full suite of flexible, value-driven solutions that help organizations manage their global technology needs.

Why CNE?

CNE is an expert in lifecycle management solutions. Our specialists understand the challenges that come with managing procurement, product inventory, testing & repair, disposition, and downstream value recovery. We have the tools and the staff to help you manage all stages of the technology product lifecycle – backed by market leading business intelligence and in-depth reporting.

IT Lifecycle Management

CNE's lifecycle management solutions include:

- **Procurement:** Whole unit and/or parts procurement, kitting, end-of-life, and last time buys.
- **Inventory Management:** Inventory rebalancing, excess, and obsolete inventory management.
- **Testing & Repair Services:** Testing, screening, repair, refurbishment, and advanced exchange.
- **IT Asset Disposition:** Product decommissioning, data security and erasure, parts harvesting, and refurbishment.
- **Value Recovery:** Ability to create markets and return value for new and used IT assets through our global sales and remarketing network.
- **Business Intelligence:** Providing visibility into the IT lifecycle management process with business intelligence tools, market data, and in-depth reporting that aid management in making critical IT business decisions.

Companies choose CNE's IT lifecycle solutions for our market expertise, systems, reporting, and business intelligence, to help them efficiently manage their technology ecosystem.
